DETAILED ACTION

Allowable Subject Matter

1. **Claims 1, 3-4**, are allowed.

The following is an examiner's statement of reasons for allowance:

Regarding claim 1, the present application teaches a method for controlling an overload in a digital mobile communications system having a base station transceiver and a base station controller, wherein each of the base transceiver station controller determining changing the overload threshold values according to a control signal from the base station manager. Threshold values are determined and stored in a database. Utility rates of a control processor resource and a call resource are monitored and compared to corresponding threshold values to thereby obtain overload grades for each of the control processor resource and the call resource. The overload grades are then compared to each other to select one of the control processor resource or the call resource as the resource to be controlled according to which has the highest overload grade. The system then determines if an overload occurs in the selected resource, and alerts the base station manager accordingly.

The closest prior art to the present application such as Choi discloses a method of controlling an overload in a digital mobile communications system having a base station transceiver and a base station controller, Choi's method independently comparing the utility rates of the control processor resource and the call resource independently to their respective threshold values. Choi fails to disclose each utility rate

of the control processor resource and the call resource is compared to its own threshold value to obtain an overload grade.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
